Flashcards

Business Analyst Free University. Study notes, October 2026.

Flip these in the lab, or read them here.

- Business analysis: The practice of understanding a need and shaping a valuable change.
- Business analyst: A person who performs business analysis, whatever the job title.
- Need: A problem or opportunity to be addressed.
- Stakeholder: A person or group with a relationship to the change.
- Requirement: A usable representation of a need, ready for further work.
- Design: A usable representation of a solution.
- Constraint: A limit on the solution that the team does not choose.
- Assumption: A belief treated as true for now, still to be confirmed.
- Scope: The boundary of what is in and out of the change.
- Elicitation: Drawing out information from stakeholders and other sources.
- Workshop: A facilitated session with a purpose and a record.
- Baseline: An agreed version used for later comparison.
- Traceability: A link from a need to requirements, designs, and tests.
- RTM: A requirements traceability matrix: a table of those links.
- UAT: User acceptance testing: a decision against agreed criteria.
- User story: A short statement of role, capability, and outcome.
- Acceptance criteria: The conditions that show a story or requirement is met.
- Gherkin: A language for scenarios using Given, When, and Then.
- BPMN: Business Process Model and Notation, published by OMG.
- Gateway: A BPMN decision point that splits or joins flow.
- UML: Unified Modeling Language, published by OMG.
- ERD: A drawing of entities and the relationships between them.
- C4: A model with system, container, component, and code views.

Shield Independent, free, learning-only student project. Respects every company and vendor. Trademarks belong to their owners. Not affiliated or endorsed. Concerns are removed or corrected promptly via the contact form at https://cyphermonkeylabs.com/#contact. Nothing is sold. Happy to volunteer for any organization.

- KPI: A key performance indicator tied to a decision.
- HEART: Happiness, engagement, adoption, retention, and task success.
- OKR: An objective plus measurable key results.
- Product backlog: The ordered list of what is known to be needed in the product.
- Increment: A concrete step toward the product goal, in Scrum.
- Product owner: An accountability on the Scrum Team for the backlog and value.
- RACI: A matrix of responsible, accountable, consulted, and informed.
- SWOT: Strengths, weaknesses, opportunities, and threats.
- ADKAR: Awareness, desire, knowledge, ability, and reinforcement.
- Business case: A recommendation that shows why a course of action is worth it.
- Fit-gap: A comparison of what a product already does and what the need still requires.
- Process mining: Reconstructing a process from event logs.
- Non-functional requirement: A quality attribute such as speed, security, or availability.
- CBAP: Certified Business Analysis Professional, an IIBA credential.
- ECBA: Entry Certificate in Business Analysis, an IIBA credential.
- PMI-PBA: PMI's Professional in Business Analysis credential.
- BACCM: The Business Analysis Core Concept Model in the BABOK Guide.
